EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bruno Polito on 2/2/2006 3:18 PM.

Claims 1 and 6 of the application has been amended as follows:

Claim 1. An optical communication apparatus in which light for transmission and light for receipt are propagated simultaneously over a sole cable to effect bidirectional communication, comprising:

light emitting means for emitting said light for transmission;

light receipt means for receiving said light; and

light guide means for guiding said light for transmission over said cable and for guiding said light to said light receipt means, wherein

a value of a light volume M of stray light generated with respect to said light receipt means satisfies the following relationship:

$$S - 2QN \ge M > S/2Q - N$$

Where Q is the value of a Q-value representing communication quality as required, S is light volume of a received signal from a communication partner and N is a sum total of a Gaussian noise.

Application/Control Number: 10/019,332 Page 3

Art Unit: 2633

Claim 6. An optical communication method, comprising the steps of: emitting light for transmission from a light emitting means, receiving light at a light receipt means, and guiding said light for transmission and said light for receipt over a sole cable, said light for transmission and said light for receipt of substantially the same wavelength being propagated substantially simultaneously by said cable to effect bidirectional communication; wherein

value of a light volume M of stray light generated with respect to said light receipt means satisfies the following relationship:

$$S - 2QN \ge M > S/2Q - N$$

Where Q is the value of a Q-value representing communication quality as required, S is light volume of a received signal from a communication partner and N is a sum total of a Gaussian noise.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Danny Wai Lun Leung whose telephone number is (571) 272-5504. The examiner can normally be reached on 9:30am-7:00pm Mon-Thurs..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on (571) 272-3022. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
